

We have a chain of restaurants in the NCR (National Capital Region) and are running the successful venture in the name of Café Delhi heights.

We have had the experience of 20 years in this industry and have always been saddled with the problem of clients looking for a comfortable place with the right amount of cooling to have a pleasurable experience of fine dining. The normal air conditioning, apart from being hot at places and cold at others was also a restraining factor while placing our tables and we always landed in situations where we lost out on precious space and resultantly, lesser number of seating.

We installed fabric ducts from DuctSox in one of our restaurants and have effectively overcome the problem of hot spots and cold spots. This has not only helped us in laying out more seating space but also reduce our air conditioning effort in terms of tonnages, thereby reducing our energy costs. All Café Delhi Heights outlets in the NCR have now been installed with fabric ducts from DuctSox.

We would recommend all restaurants to use fabric ducts.
